

Mobile Vehicle Admin 2009

Getting Started

Getting Started

Thank you for buying Mobile Vehicle Admin 2009! This guide will help you to install und configure your desktop computer and Pocket PC device.

Step by Step instructions:

1. Before installing, ensure that you have downloaded the newest .net Framwork for your desktop device and the newest compact .net framework for your Pocket PC. If you are not sure which version the newest is, you can install .net framework from our site which is always compatible with our software.

2. Soft-reset your Pocket PC device to ensure that no applications are running in the background, which may intefere with Mobile Vehicle Admin 2009. After performing the soft-reset, connect your device and wait until ActiveSync has completetd syncing all your items for backup (Calender, Contact, Tasks, Inbox, etc.).
3. We recommend that you have only Mobile Vehicle Admin 2009 with no additional Software from other Developer on the same device to ensure that Mobile Vehicle Admin 2009 will be running perfectly.
4. Close all non-essential applications on your desktop computer to ensure a smooth installation.
5. We recomment selecting the default choices for each step through the Setup wizard.
6. Active Sync ask you if want to install the Pocket PC version either in main memory or an external storage card on your mobile device.
7. Locate the newly installed Mobile Vehicle Admin 2009 icon on your desktop computer and double-click it to start the program.
8. The following dialog box will be presented when you first use the program. The desktop version will not work until you register your Pocket PC version. See step 9.

9. Start the program on your Pocket PC device by locating it under your device's Start menu.

10. On your Pocket PC you will see a dialog which will ask you to type your RPN-String in the field, which you got from our Softwaredistributionspartners (Handango, Pocketgear, Pocketland, etc.)

11. If you have done this correctly your Pocket PC Edition will pop up “Thank you for buying Mobile Vehicle Admin”.
12. Now put your device in your docking station and connect it with the desktop computer.
13. Please wait until the Active Sync has done his job.
14. After that go on with the desktop edition of Mobile Vehicle Admin 2009 and click the „register” button as shown by step 8.
15. If you have done all the points correct you will see the following box.

Ensure that the “Create a new database” file option is selected and press OK. You are asked for a location to store the MVA data file. This is the single file in which all the data for all your vehicles are stored. Select safe location that is easy to remember and backup. By default, the program suggests creating the new file under your My Documents folder. The file name and location can be changed if you wish.

Note: The data file’s location has no effect on syncing data with your mobile device, so it should not be stored in any special folder such as „Pocket_PC My Documents”.

16. Finally, the program should start up with several empty lists since you obviously do not have any data at this point.

- ❖ You will need to set up your preferred units for distance and volume. Click main form >Options and make the appropriate selections.

Note: The units should not be changed once data has been entered into the program.

- ❖ Now click on the main form and click on add Vehicle to set up your first vehicle.
- ❖ RapidSync synchronise your desktop with your Pocket PC if you have connected your Pocket PC with your desktop.

Note: Please read the Users Manual to set up Microsoft Active Sync.
